QUARTERLY DELIVERY REPORT

Delivery Report — Q3 2026

July – September 2026 · Published 29 September 2026

Summary

How our engagements performed this quarter: response times against the SLA, milestone punctuality, uptime on managed systems and the time clients got back from the delivery model. Published every quarter, whether the numbers are flattering or not.

- 94% of milestones delivered on or before the agreed date across 38 active engagements
- 99.96% uptime across managed production systems, with every backup restore-tested in the quarter
- Average first reply of 3 hours 40 minutes against the contractual 24-hour SLA, with zero breaches
- Thin-slice prototypes reached working software in 19 days on average from scope sign-off

Time returned to client teams per engagement, hours per month

Values in hrs / month

Status meetings replaced by weekly demos	16 hrs / month
Manual month-end reconciliation	14 hrs / month
Chasing vendor updates	9 hrs / month
Re-keying data between tools	22 hrs / month
Reporting assembled by hand	11 hrs / month

Delivery scoreboard

Figures below are drawn from our delivery tracker for the quarter and compared with the contractual commitments in every engagement agreement.

Average first reply	3h 40m	24-hour SLA
Milestones delivered on time	94%	Target 90%
Uptime across managed systems	99.96%	Target 99.9%
Active engagements	38	9 sectors
Live demos delivered	310+	Every Friday, every project
Average thin-slice to working software	19 days	Target 21 days
Production deploys per month	220+	All with rollback
SLA breaches	0	Since SLA entered contracts

What went well

- Three multi-site rollouts (a 22-outlet restaurant chain, a 4-campus school group and a 3-factory HRMS) closed on schedule with zero go-live incidents.
- The cost-audit engagement recovered 34% of a SaaS platform's cloud spend in one week, funding the monitoring it had been missing.
- Every backup across managed systems was restore-tested during the quarter; recovery times are now documented per data store.

What we are fixing

- Six percent of milestones slipped, mostly on client-side data readiness. From Q4, master-data cleanup is a scoped, dated milestone in every ERP and HRMS plan.
- Two engagements reported reply times above 8 hours on public holidays. On-call rotas now cover Indian and client-country holidays explicitly.
- Thin-slice timing varies by integration count. We now quote the thin-slice date per integration profile rather than as a single average.

Method

Response times are measured from the client's first message in the shared channel or ticket to the first substantive written reply by a named engineer. Milestone punctuality compares the delivered date to the date in the signed sprint plan; re-scoped milestones count as late unless re-dated in writing before the original date. Uptime is measured by external synthetic checks every minute. Time-returned estimates are self-reported by client teams during quarterly reviews and rounded to the nearest hour.
